

第一章

Generalizing

近似值

First, cultural generalizations must be viewed as approximations, not as absolute representations.

要

Second, when you do make generalizations, they should deal with the primary values and behaviors of a particular culture.

Third, when employing generalizations, try to use those that can be supported by a variety of sources.

限定

Finally, conclusions and statements about cultures should be qualified so that they appear not as absolute but only as cautious generalizations

第二章

Communication and Culture: The Voice and the Echo

2.1 Human communication

回声

Communication—our ability to share our ideas and feelings—is the basis of all human contact.

What is important is not the tools you use but rather the idea that you are sharing part of yourself with another human being.

2.2 The uses of communication

人际需求

1. Communication helps fulfill interpersonal needs

People are basically social creatures; therefore, communicating with others satisfies a great many needs.

2. Communication assists with person perception

Communication assists in collecting data about other people.

3. Communication establishes cultural and personal identities

Communication is crucial in establishing your personal identity, since you are born into this world without a sense of self.

4. Communication has persuasive qualities

说服力

2.3 Defining human Communication

Human communication is a **dynamic** process in which people attempt to **share** their thoughts with other people through the use of **symbols** in particular **settings**.

特定环境 要素

2.4 The ingredients of human Communication

1. There is a **Source**. 源头 组件 编码
2. This brings us to our second component—**encoding**.
3. Encoding leads to the production of the **message**.
4. It is the **channel** that provides that necessary connection.

5. It must encounter a **receiver**.
 6. The receiver **decodes** the message.
 7. The perception of the response to your message is called **feedback**.
 8. The concept of competing stimuli is referred to as **noise**.

2.5 Components of human Communication

Communication is a **dynamic** process

Communication is **symbolic**

Communication is **contextual** 上下文

Number of participants, Environmental context, Occasion, Time

Communication is **self-reflective**

Communication is **irreversible** 不可逆转

Communication has a **consequence**

Communication is **complex**

Misconceptions about human Communication

Communication can solve all problems

Some people are born effective Communication

The message you send is the message received

2.6 Culture

Culture defined

Culture is a set of human-made **objective** and **subjective** elements that in the past have increased the probability of survival and resulted in satisfaction for the participants in an **ecological niche**, and thus became shared among those who could communicate with each other because they had a **common language** and they lived in the same time and place.

Characteristics of culture

Culture is **shared**

Whereas your personal experiences and genetic heritage form the unique you, culture unites people with a collective frame of reference.

Culture is **transmitted from generation to generation**

For a culture to endure, it must make certain that its crucial messages and elements are not only shared but also passed to future generations.

Culture is based on **symbols**

Symbols such as flags, wedding rings, gestures, words, dress, objects, statues, and religious icons all have message value.

Culture is **learned**

It should be clear by now that culture is not innate; it is learned.

Culture is **dynamic**

The elements of culture

worldview, religion, history, values, social organizations, language

2.7 Developing intercultural competence

The basic components of intercultural communication competence

motivation, knowledge, skills

动机 知识 技能

第三章

1. Definition of Family

A single definition of family is difficult to construct, since what constitutes a family, especially in the United States, can take a variety of configurations.

A definition advanced by **Lamanna and Riedmann** is acceptable: A family is any sexually expressive or parent-child or other kin relationship in which people——usually related by ancestry, marriage, or adoption——form an economic unit and care for any young; consider their identity to be significantly attached to the group; commit to maintaining that group over time.

2. Functions of the Family

Reproductive function: The most important function of the family in any culture is reproduction. The family makes continuation of the culture possible by producing (or adopting) children to replace the older members of the culture as they pass on.

Economic function: The second function of families is to supply children with the necessities of life (food, clothing, shelter). In subtle and manifest ways, the family teaches economic sharing and responsibility.

Socialization function: Teaching children how to fit into their particular culture is one of the family's most important tasks. Part of a family's socialization process is teaching the culture's core values, beliefs, ways of behaving, and worldview. This means that parents teach their children behaviors that are appropriate, expected, moral, or polite.

Language acquisition function: The family is the place where children learn the language of the culture they are born into. The process of learning words, what they mean, and how to use them begins at birth and has its origins in the family.

Identity function: The family is perhaps the most important of all identities, as it is a precursor to other identities. Family is not only the basic unit of a society but also provides individuals with their most essential social identity.

第四章

感知

1. Characteristics of Perception

The five characteristics of perception:

Perception is selective——Because there are so many stimuli simultaneously competing for the attention of senses, you focus only on selected information and filter out the rest.

Perception is learned——Life's experiences teach you to see the world in a particular way.

Perception is **culturally determined**——Culture teaches you the meaning behind most of your experiences.

Perception is **consistent**——Once you perceive something in a particular manner, that interpretation is usually resistant to change.

Perception is **inaccurate**——You view the world through a subjective lens influenced by culture, values, and personal experiences. This tends to make you see what you expect or want to see.

2. Definitions of Beliefs, Values, and Behaviors

(1) **Beliefs**: A belief is a concept or idea that an individual or group holds to be true.

(2) **Values**: These cultural values provide a set of guidelines that assist the culture's members in deciding what is good or bad, desirable or undesirable, right or wrong, and appropriate or inappropriate in almost every context of human activity.

(3) **Behaviors**: Behaviors are the outward manifestations of people's internalized beliefs and values.

3. Four caveats(features) of Culture Patterns

The following four caveats should be kept in mind:

You are more than your culture: all individuals within a cultural group may not share the dominant values of that culture.

Cultural patterns are integrated: it is important to realize that cultural patterns do not occur or operate in isolation; they are interrelated and integrated.

Cultural patterns are dynamic: values can evolve and produce societal change. The interconnected world created by globalization has enabled people in other nations to learn about different values and social structures.

Cultural patterns can be contradictory: in many instances, contradictory values within a culture can be found.

4. Definitions of High- Context and Low- Context Orientations

A high-context (HC) communication or message is one in which most of the information is already in the person, while very little is in the coded, explicitly transmitted part of the message.

A low-context (LC) communication is just the opposite; i.e., the mass of the information is vested in the explicit code.=words

5. Definitions of:

Individualism/ collectivism:

The **individualism/collectivism continuum** can be defined with the following:

Collectivistic cultures emphasize **community**, **collaboration**, **shared interests**, **harmony**, **tradition**, **the public good**, and **maintaining face**.

Individualistic cultures emphasize **personal rights** and **responsibilities**, **privacy**, **voicing one's own opinion**, **freedom**,

创新

innovation, and self-expression.

不确定性规避

Uncertainty avoidance: The core of uncertainty avoidance is that the future is unknown. As used in Hofstede's research, uncertainty avoidance can be defined as “the extent to which the members of a culture feel threatened by ambiguous or unknown situations.”

Power distance: The concept is defined as “the extent in which the less powerful members of institutions and organizations within a country expect and accept that power is distributed unequally.”

Masculinity/ femininity:

Masculinity is the extent to which the dominant values in a society are male oriented.

Cultures that value **femininity** as a trait stress nurturing behaviors. A society is called feminine when emotional gender roles overlap: Both men and women are supposed to be modest, tender, and concerned with the quality of life.

导向

温柔

Long- and short- term orientation:

Long-term orientation stands for the fostering of virtues oriented toward future rewards—in particular, perseverance and thrift.

毅力

节俭

(回报未来)

Short-term orientation stands for the fostering of virtues related to the past and present—in particular, respect for tradition, preservation of “face,” and fulfilling social obligations.

义务

(现在相关)

6. Definitions of Face and Facework

The term “**face**” is commonly used as a metaphor to designate the self-image a person projects to other people. In other words, your “face” is your public identity, how you are perceived by others.

比喻

Facework is defined as “a set of coordinated practices in which communicators build, maintain, protect, or threaten personal dignity, honor, and respect.”

第五章

Chapter 5: Culture and Identity: Situating the Individual

5.1 Identity: Defining the Concept

Scholars' definition of identity

Identities are stable features of persons. They are dynamic and situated accomplishments, enacted through talk, changing from one occasion to the next. Identities are social categories and are personal and unique.

(反映)

Categories of identity

? Turner's three identity categories

Human identity

Social identity

Human ↔ Social ↔ Personal

Personal identity

② Hall's three identity categories

Personal identity

Relational identity Personal $\leftrightarrow$ Relational $\leftrightarrow$ Communal

Communal identity 公共标识

5.2 The Influence of Identity

The study of identity in intercultural communication tends to focus on how identity influences and guides expectations about one's own and others social roles and provides guidelines for communicating with others.

5.3 Examining Social Identities

Racial Identity

Race is a social construct arising from historical attempts to categorize people into different groups. Today, racial classifications and identity are usually associated with a person's external physical traits principally skin color but also physiognomy and hair texture. 相貌 发质

Gender Identity

Gender is a socially constructed concept that refers to how a particular culture differentiates masculine and feminine social roles.

Ethnic Identity 民族认同

Ethnic identity, or ethnicity, is derived from a sense of shared heritage, history, traditions, values, similar behaviors, geographical area of origin, and language

National Identity

The majority of people associate their national identity with the nation where they were born. However, national identity can also be acquired through immigration and naturalization

Regional Identity 区域标识

Every country can be divided into a number of different geographical regions, that are often characterized by varying cultural traits. These cultural contrasts may be manifested through ethnicity, language, accent, dialect, customs or different historical and political legacies. 政治遗产

Organizational Identity

A person's organizational affiliations can be an important source of identity in some cultures. This is especially true in collectivistic cultures but much less so in individualistic cultures.

Personal Identity

Personal identity arises from characteristics that set you apart from others in your in-group —those things that make you unique and influence how you see yourself. Scholars typically use the term self-construal to denote how individuals view themselves in relation to others.

Cyber identity and Fantasy Identity 网络身份和幻想身份

The Internet allows individuals to select and promote what they consider the positive features of their identity and omit any perceived negative elements or 忽略

建立一个网络身份

even construct a cyber identity, that may or may not correspond to their actual identity.

Fantasy identity, which also extends across cultures, centers on characters from science fiction movies, comic books (manga), and anime.

Other Identities

Religious identity

Political identity

Socioeconomic identity

Tribal identity 部落身份

5.4 Identity Acquisition and Development

Phinney's three-stage identity development model

Initial stage: Unexamined ethnic identity 未经检验的初始身份

Second stage: Ethnic identity search 民族身份搜索

Final stage: Ethnic identity achievement 民族认同的达成

Multistage Identity Development Models

Stage 1 Unexamined identity: being of little concern. 不被关注

Stage 2 Acceptance: acquiescence to existing social inequities, even though such acceptance may occur at a subconscious level.

Stage 3 Resistance: members of the dominant culture become more aware of existing social inequities, begin to question their own culture, and increase their association with minority culture members. Martin and Nakayama's biracial identity development model 融合

Stage 4&5 Redefinition and reintegration: It brings an increased understanding of one's dominant culture identity and an appreciation of minority cultures. Ascribed identities or avowed identities

Martin and Nakayama's biracial identity development model

Stage 1: Biracial individuals may rotate through three phases where they (1) become conscious of differences in general and the potential for discord, (2) gain an awareness of their personal differences from other children, and (3) begin to sense they are not part of the norm.

Stage 2: A struggle to be accepted and the development of feelings that they should choose one race or another.

Stage 3&4: Biracial individuals accept their duality, becoming more self-confident.

被赋予的

公开的身份

Ascribed identities or avowed identities

Identities can also be classified as ascribed or avowed, based on how they are acquired, a distinction referring to whether an identity was obtained involuntarily or voluntarily.

Racial, ethnic, and sexual identities are assigned at birth and are considered ascribed, or involuntary.

By contrast, your identity as a particular university student is avowed because you voluntarily elected to attend the school.

第六章

Chapter 6: Verbal Messages: Exchanging Ideas Through Language

6.1 Functions of Language

Social Interaction 社会互动

Language allows you to speak, read, write, listen to others, and even talk to yourself—or to think.

Language allows you verbally to convey your internal emotions and relieve stress by simply uttering a phrase or a swear.

Language is also employed to invoke assistance from the supernatural

Social Cohesion 社会凝聚力

A common language allows individuals to form social groups and engage in cooperative efforts

Expressions of Identity

Language is the major mechanism through which much of individual and group or cultural identity is constructed. Identities do not exist until they are enacted through language.

6.2 What Is Language?

Words are only symbols 文字只是符号

Words are arbitrary 单词是任意的 内在意义

Words evoke denotative or connotative meanings

6.3 Language and Culture

Language and Thought

words and meanings differ from one culture to another, thought processes and perceptions of reality also differ. language is not simply a means of reporting experience but, more importantly, a way of defining experience.

Language Variations

Accents; Dialect; 黑话 俚语 发短信 成语
Argot; Slang; Texting; Idioms

Using Language

English; Spanish; Brazilian Portuguese; Northeast Asian; Arabic; German

第七章

非语言沟通

7.1 Defining Nonverbal Communication

Nonverbal communication involves all those nonverbal stimuli in a communication setting that are generated by both the source and his or her use of the environment and that have potential message value for the source and/ or receiver.

7.2 Intentional and Unintentional Messages 无意

One of the features that separate humans from most other animals is that humans can usually plan certain actions before they execute them. Observing a friend approaching, you offer a broad smile as part of your greeting. This is an intentional act.

Yet nonverbal messages are most often produced without a conscious awareness that they may have meaning for other people. These are unintentional messages.

7.3 Verbal and Nonverbal Messages

Nonverbal messages can serve as substitutes for verbal messages. In addition, verbal and nonverbal messages often work in unison ^{一致}

7.4 The Functions of Nonverbal Communication

1. Convey internal states ^{传达内部状态}

Consciously and unconsciously, intentionally and unintentionally, people make important judgments about each other through nonverbal symbols. These symbols express attitudes, feelings, values, and emotions.

2. Create identity

Not only do you use nonverbal communication to tell others about what you are thinking and feeling, but you also utilize nonverbal symbols to tell yourself and others who you are. In this sense, nonverbal messages are partially responsible for establishing your identity.

3. Regulate interaction

Nonverbal actions offer clues regarding how people navigate conversation. As you approach someone you do not want to visit with, you may look down to indicate your lack of willingness to interact. Conversely, direct eye contact and a smile could send a message that you want to talk with the person who is approaching you. These and other actions can regulate everything from when the conversation can begin, when it is your time to speak, and even when it is time for the interaction to conclude.

4. Substitute for words

Another function of nonverbal messages is that they can be used as substitutes for words. For example, a teacher may place an index finger to the lips as an alternative to saying, "Please be quiet". People often use the hands to beckon someone to come closer or use the same hands to say good-bye. In each of these examples, an action is replacing a verbal utterance, and that action becomes the language.

7.5 Studying Nonverbal Communication ^{多渠道}

1. Nonverbal communication is a multichannel activity.

2. Nonverbal communication is often ambiguous

3. Numerous variables influence nonverbal communication ,As noted elsewhere, people are the products not only of their culture, but also of their gender, region, occupation, political affiliation, educational background, and countless other factors that have shaped their perceptions, values, attitudes, beliefs, and nonverbal communication.

7.6 Nonverbal Communication and Culture

Nonverbal communication mirrors the learned behaviors embedded in a culture. It is part of the socialization process and presents the members of each culture with cultural rules. These rules are manifested in norms, values,

attitudes, traditions, customs, and heritage and are communicated across generations.

7.7 Classifications of Nonverbal Communication

1. Messages of the body

2. Appearance

People from around the globe have been altering the way they appear for thousands of years. From that period to the present, historical and archaeological evidence has shown that people are fixated on their bodies. The alterations to their bodies have helped them tell others about whom they are and where they belong.

3. Body movement

The study of how movement communicates is called kinesics, which are those visible body shifts and movements that can send both intentional and unintentional messages

4. Space and Distance

The variation in distance between you and other people is as much a part of the communication experience as the words being exchanged. The study of this message system is called proxemics 人际距离学. Hall defines proxemics as the interrelated observations and theories of man's use of space as a specialized elaboration of culture.

5. Time

5.1 Informal Time

Informal time is usually composed of two interrelated components punctuality and pace

5.2 Monochronic (M-Time) and polychronic (P-Time)

Hall established a classic taxonomy for examining the link between culture and time. He proposed that cultures organize time in one of two ways either monochronic (M-Time 单一时间模式) or polychronic (P-Time 多元时间模式), which represents two approaches to perceiving and utilizing time.

6. Silence

Within the interpersonal setting, silence can provide an interval in an ongoing interaction during which the participants have time to think, check or suppress an emotion, encode a lengthy response, inaugurate another line of thought, call attention to certain words, express various emotions, or indicate thoughtfulness. Silence also provides feedback, informing both sender and receiver about the clarity of an idea or its significance in the overall interpersonal exchange
